Team 29 AI Report

AI Usage Scale: 3 (Directed)

Models Used

Claude Opus 5.5; Codex 6 Luna (High Performance); ChatGPT Image Generation

Description

Our team developed the idea, scope, plan, and sequence of the project. Claude Opus 5.5 was our primary coding assistant and contributed most to implementing the visualisations and integrating the overall application. Codex 6 Luna (High Performance) helped us debug issues and resolve bugs.

We reviewed the generated code and checked its behaviour against the source data. We checked code and asset sources and licences; our sound effects were synthesised by the team and are credited under CC0 1.0. ChatGPT image generation was used for character avatars and Bitmoji-style artwork, with Claude helping draft and refine the image prompts. Framer Motion provides interface animation. AI assistance also helped coordinate GitHub work and pushes across several branches. Our team handled production deployment.
